SCAG

Your mower was built to the highest standards in the industry. However, your mower is only as safe as the operator. Carelessness or error on the part of the operator may result in serious bodily injury. Hazard control and accident prevention are dependent upon the awareness, concern, prudence, and proper training of the personnel involved in the operation, transport, maintenance, and storage of the equipment. Make sure every operator is properly trained and thoroughly familiar with all of the controls before operating the equipment.

SAFETY INSTRUCTIONS

 Know the controls and how to stop quickly. READ THIS TECHNICAL MANUAL and instructions furnished with attachments. A replacement manual is available by sending complete model and serial number to:

> SCAG Power Equipment, Inc. 1000 Metalcraft Drive Mayville, WI 53050

- 2. Do not allow children to operate the machine. Do not allow adults to operate it without proper instruction.
- 3. Do not carry passengers. Do not mow when children and others are around.
- 4. Clear the work area of objects (wires, rocks, etc.) that might be picked up and thrown.
- 5. Disengage all attachment clutches and engage parking brake before attempting to start the engine.
- Disengage power to attachments and engage parking brake before leaving the operator's position.
- 7. Disengage power to attachments, stop the engine and remove key before making any repairs or adjustments.
- 8. Disengage power to attachments when transporting or not in use.
- Take all possible precautions when leaving the vehicle unattended, such as disengaging power to attachments, lowering the attachments, setting the parking brake, stopping the engine, and removing the key.
- 10. Do not stop or start suddenly when going uphill or downhill. Mow up and down the face of steep slopes; never across the face.
- 11. Reduce speed and exercise extreme caution on slopes and in sharp turns to prevent tipping or loss of control. Be especially cautious when changing direction on slopes.

- 12. Stay alert for holes, rocks, and roots in the terrain and other hidden hazards. Keep away from drop-offs.
- 13. Use care when pulling loads or using heavy equipment.
 - a. Use only approved drawbar hitch points.
 - b. Limit loads to those you can safely control.
 - c. Do not turn sharply. Use care when backing.
 - d. Use counterweights or wheel weights when suggested in this technical manual.
- 14. Watch out for traffic when crossing or near roadways.
- 15. When using any attachments, never direct discharge of material toward bystanders nor allow anyone near the mower while in operation.
- 16. Handle gasoline with care it is highly flammable.
 - a. Use approved gasoline container.
 - b. Never remove the fuel cap of, or add gasoline to, a running or hot engine or an engine that has not been allowed to cool for several minutes after running. Never fill the tank indoors and always clean up spilled gas.
 - c. Open doors if the engine is run in the garage exhaust fumes are dangerous.
 - d. Do not run the engine indoors.
- 17. Keep the mower and attachments in good operating condition, and keep safety devices and shields in place and in working condition.
- 18. Keep all nuts, bolts, and screws tight to be sure the equipment is in safe working condition.
- 19. Never store the equipment with gasoline in the tank inside a building where fumes may reach an open flame or spark. Allow the engine to cool before storing in any enclosure.

SAFETY INSTRUCTIONS CONT'D

- 20. To reduce fire hazard, keep the engine free of grass, leaves or excessive lubricants.
- 21. The vehicle and attachments should be stopped and inspected for damage after striking a foreign object, and the damage should be repaired before restarting and operating the equipment.
- 22. Do not change the engine governor settings or overspeed the engine.
- 23. When using the machine with mower, proceed as follows:
 - a. Mow only in daylight or in good artificial light.
 - b. Never make a cutting height adjustment while the engine is running if the operator must dismount to do so.
 - c. Shut the engine off and remove key when removing the grass catcher or unclogging chute.
 - d. Check the blade mounting bolts for proper tightness at frequent intervals.
- 24. Under normal usage, the grass catcher bag material is subject to deterioration and wear. Check bag frequently for deterioration and wear and replace worn bags. Check that replacement bags comply with the original manufacturer's recommendations or specifications.
- 25. Disengage power to mower before backing up. Do not mow in reverse unless absolutely necessary and then only after observation of the entire area behind the mower.
- 26. The discharge chute must be installed and in the down position on the side discharge mower; except when optional grass catcher is completely installed. If the mower discharge ever plugs, shut engine off and wait for all movement to stop before removing obstruction.
- 27. Perform only those maintenance instructions described in this manual. If major repairs are ever needed or assistance is desired, contact

an Authorized Scag Servicing Dealer. To ensure optimum performance and safety, always purchase genuine SCAG replacement parts and accessories. NEVER USE "WILL FIT" replacement parts and accessories made by another manufacturer. Use of unapproved replacement parts may void the warranty.

A WARNING

Do not operate on steep slopes. To check a slope, attempt to back up (with cutter deck down). If unit can back up the slope without the wheels slipping then slope should be managable with careful operating procedures.

HYDRAULIC SAFETY

- Safely relieve all pressure in the system before disconnecting the lines or performing work on the system.
- Keep body and hands away from pin holes or nozzles that eject hydraulic fluid under high pressure. Use paper or cardboard and not hands to search for leaks.
- Hydraulic fluid escaping under high pressure may have sufficient force to penetrate skin and cause serious injury. If foreign fluid is injected into the the skin, it must be surgically removed within a few hours by a doctor familiar with this form of injury or gangrene may result.
- Make sure all hydraulic fluid connections are tight and all hydraulic hoses and lines are in good condition before applying pressure to the system.

SETUP INSTRUCTIONS

1. Remove all crating and packing materials. Layout loose mounting hardware according to the "Where Used" as listed in the loose parts packing list.

A WARNING: Severe chemical burns can result from improper handling of battery electrolyte. Use proper eye, skin and clothing protection to prevent contact with eyes, skin and clothing.

External contact: Flush with water.

Internal contact: Drink large quantities of water, followed with milk of magnesia, beaten egg or vegetable oil. CALL A PHYSICIAN IMMEDIATELY!

IMPORTANT - In case of internal contact DO NOT give fluids that would induce vomiting. Eye contact: Flush with water for at least 15 minutes and get medical attention immediately!

WARNING: Explosive gases are vented from a battery when being charged or discharged which could explode if exposed to a flame or spark.

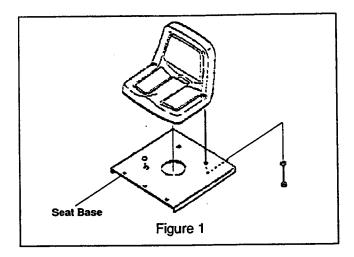

2. Remove battery from the unit. Fill with electrolyte solution.

Charge at 3 to 5 amps for about 2 hours. Check fluid level and add electrolyte until level is up to the bottom of the split ring.

NOTE: Future need to adjust fluid level requires distilled water.

Wash and dry off battery. Coat terminals with grease to minimize corrosion.

- 3. Mount drive tires using lug nuts located on the hubs.
- 4. Attach the seat assembly to the seat base using four 5/16-18 x 3/4" bolts and 5/16" lock washers.

5. Remove cable tie holding seat safety switch to engine and mount safety switch to underside of seat using two 1/4-20 x 1/2" socket head screws and 1/4" lockwashers.

Note: Machine will not operate without switch properly mounted and connected.

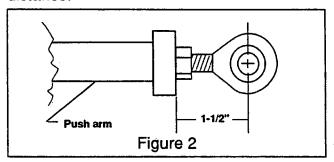

- 6. Attach arm rests to seat back and use setscrews to adjust arm rests so they are horizontal.
- 7. Mount RH and LH hand control handles using 5/16-18 x 1-1/2" hex head bolt and 5/16-18 elastic stop nut. Bolt needs to be installed from the front, nut towards rear of unit. Do not overtighten bolt to the point where the hand control handles will not move freely.
- 8. Attach neutral lock bracket using two 5/16-18 x 3/4" hex head bolts, 5/16 lockwashers and neutral lock bars.

WARNING: Do not operate machine without cutter deck properly mounted.

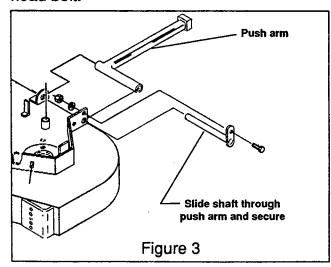

SETUP INSTRUCTIONS CONTINUED

 Check that cutter deck push arms are set for the same distance. There should be approximately 1-1/2" from end of arm to center of ball joint (See figure 2). Both must be the same distance.

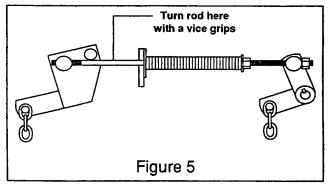

- 10. Roll cutter deck underneath the cutter deck mounting frame.
- 11. Attach push arms to cutter deck by lining up the holes and sliding the shaft through the arm (See figure 3). Secure with 5/16-18 x 1" hex head bolt.

- 12. Mount cutter deck to the chain on rear discharge corner and the two front chains. The two front chain mounting bolts should be installed in the two center holes on the cutter deck initially. Leave the back trim side chain disconnected for the time being.
- 13. Turn nut on cutter deck level adjustment until it bottoms out (See figure 4).

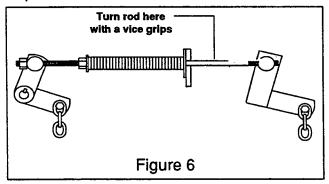

- 14. Before going on to next step, check that tire pressures are correct. The drive tires should be at 12-14 psi and caster tires should be at 25 psi. Each set of tires should be set equal.
- 15. Pull cutter deck height lever into one of the middle holes in the height control bracket.
- 16. With unit setting on a flat level surface, go to the discharge side of cutter deck and measure the distance from the rear bottom edge of the cutter deck to the ground.
- NOTE: The three chains that are connected to the cutter deck should be tight when leveling deck.
- 17. One the same side of the cutter deck, measure the distance from the front bottom edge of the cutter deck to the ground. The front dege of the cutter deck should be 1/4" lower than the rear. To make this adjustment, take a vice grips and rotate the adjustment rod (See figure 5).

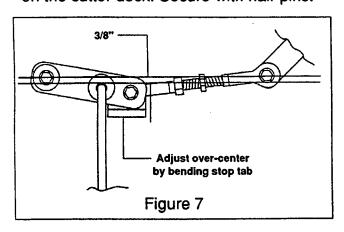

SETUP INSTRUCTIONS CONTINUED

- 18. On the trim side of the cutter deck, measure the distance from the front bottom edge of the cutter deck to the ground. If this measurement is not the within 1/4" of the one taken on the discharge side, adjust by relocating the chain mounting on the trim side either in the upper or the lower hole.
- 19. On the trim side of the cutter deck, connect the rear mounting chain by using a vice grips and turning the adjustment rod until the chain mounting bolt lines up with the hole in cutter deck without having to lift up on the deck. (See figure 6). The chain should be installed with no slack in the chain and not tight enough to lift up on the deck.

- 20. Route the blade drive belt around the engine pulley and the cutter deck pulleys.
- 21. Install the mower engagement control rod to the bellcrank located by the left drive tire and then connect to the over-center mechanism on the cutter deck. Secure with hair pins.

- 22. Push the mower engagement lever forward until the over-center mechanism snaps into place. Check the over-center spacing (See figure 7).
- 23. Place cutter deck in the cutting height that will be used when cutting grass. Relocate antiscalp wheels to the lowest position possible without making contact to the ground on a flat surface.
- 24. Attach the discharge chute to the cutter deck using two 5/16-18 x 1" bolts and elastic stop nuts. Tighten only enough to remove excessive end play. Discharge chute must be free to move up and down.
- 25. Install battery into the battery support, connect the positive cable to the positive terminal and cover with the boot, then attach the negative cable.
- 26. Check engine oil level, add as necessary (unit was filled with 10W30 motor oil at the factory).
- 27. Check hydrostatic oil reservoir, oil should be up to line on dipstick. !DO NOT OVER FILL!

 Add SAE 10W30 motor oil if necessary.
- 28. Check machine to make sure all bolts are properly tightened.
- 29. Fill fuel tank with gasoline.
- 30. Open shut-off valve under tank.

ADJUSTMENTS

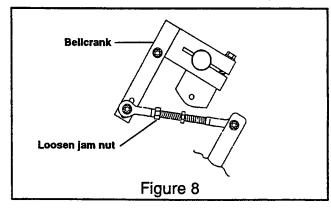

/Neutral Adjustment

- Set the frame up on jack stands, so the drive wheels are free to rotate. Block caster wheels to prevent an accident should the unit fall off the jack stands.
- 2. Start engine and determine if the drive wheels rotate.

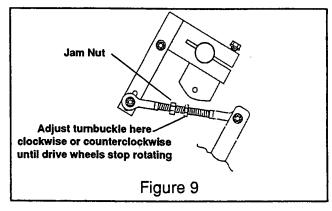

NOTE: If hydraulic components (pumps, motors, hoses, etc.) are replaced, all air **must** be bled from system prior to going to step 3.

To bleed the system at this point, run machine at about 2000 rpm for about 15 seconds at full forward and about 15 seconds at full reverse.

 Adjust each drive wheel separately by using the turnbuckles located under the operator seat and beside each of the pumps.

4. Loosen jam nut on turnbuckle (See figure 8).

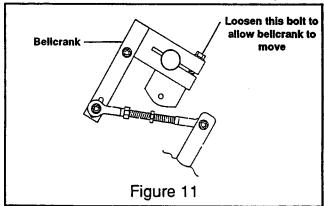

- If drive wheel is rotating forward, adjust the turnbuckle clockwise. If drive wheel is rotating rearward, adjust the turnbuckle counterclockwise. Adjust until the drive wheel stops rotating (See figure 9).
- 6. Tighten jam nut to secure neutral position (See figure 10).

- 7. Adjust other drive wheel if necessary.
- 8. Actuate hand control levers forward and reverse. Allow levers to self center and check that neutral is maintained.

Hand Control Handle Adjustment

1. Loosen bolt securing bellcrank to the shaft of the control lever (See figure 11), permitting bellcrank to rotate on shaft (both sides).

2. Loosen the (2) two bolts anchoring the neutral lock bracket to the fender (both sides).

ADJUSTMENTS CONT'D

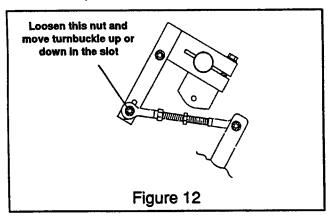

- 3. Move neutral lock brackets towards front or back to align the hand control handles.
- 4. Tighten the bolts on the neutral lock brackets.
- Tighten bolt securing bellcrank to shaft of the control lever.
- 6. Readjust neutral if necessary. See page 7 for neutral adjustment

Straight Line Running Adjustment

1. First check for equal drive wheel tire pressure.

NOTE: The right side pump has a fixed speed and cannot be adjusted, so this adjustment must be done on the left side pump.

- 2. Locate turnbuckle for left side pump under the operator seat and above the left side pump.
- 3. Loosen nut securing turnbuckle to bellcrank (See figure 12).
- Adjust position of turnbuckle by moving it in the mounting slot either up to slow down left wheel or down to speed up left wheel. Secure turnbuckle by tightening nut.
- 5. Readjust neutral in necessary. See page 7 for neutral adjustment.

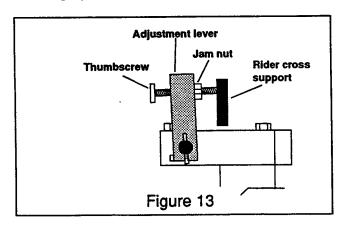

Hudraulic Bleed Adjustment

If drive is to responsive (jerky) or not powerfull enough, the dump valve adjustment lever needs to be adjusted (See figure 13).

- 1. Lossen jam nut on thumbscrew
- 2. If drive is to responsive turn thumbscrew clockwise a couple of turns to relieve hydraulic pressure. If drive lacks power turn thumb screw counter clockwise a couple of turns.
- 3. Tighten jam nut on thumbscrew agaist adjustment lever. Do not over tighten nut.
- 4. Turn adjustment lever clockwise until thumbscrew contacts rider cross support.

The dump valve adjustment lever should be adjusted where the drive is smooth but still has enough power to drive on a hill.

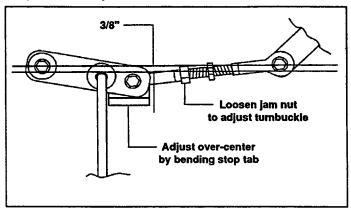

Freewheel Position

To move machine around without having the engine running, rotate dump valve lever located on the left hand side of each pump approximately 1/2 turn counterclockwise. Lever must be returned to original position in order to operate machine.

ADJUSTMENTS CONT'D

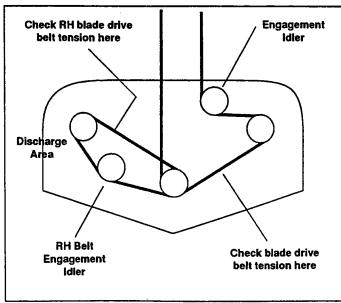

Over-Center Spacing

Engage blade clutch lever to snap over-center mechanism into place. There should be 3/8" between clutch rod and a straight edge. Bend the stop tab to adjust clearance.

Cutter Deck Drive Belt

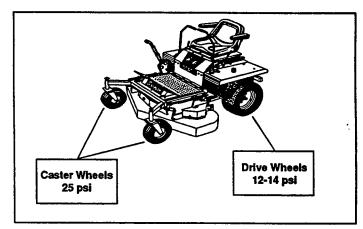

Belt tension should not be adjusted until over-center spacing is checked. Adjust the belt tension so that the belt moves 1/2" with 10 pounds of pressure. Adjustment is made by loosening the jam nut and lengthen or shorten the turnbuckle.

Right Hand Blade Drive Belt

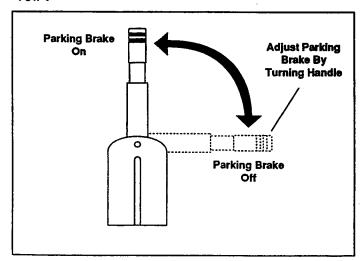

Adjust the belt tension so that the belt moves 1/2" with 10 lbs. of pressure. Adjust tension by tightening or loosening the "J"-bolt.

Tire Pressures

Parking Brake

With parking brake in the off position, turn the handle clockwise to tighten the brakes or turn the handle counter clockwise to loosen the brakes. The brakes should be adjusted so that the drive wheels lock when the brake is on rather than "roll".

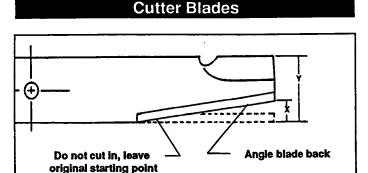

INITIAL RUN, INSPECTION AND OPERATING INSTRUCTIONS

- 1. Check for correct routing of belts and for correct clearance of belt guides.
- 2. Check for correct alignment and initial tension of cutter blade drive belts.
- 3. Check that all fasteners are correctly tightened.
- 4. Check oil levels in engine and hydraulic reservoir.
- 5. Fill fuel tank with clean fresh lead free gasoline.
- To start engine:
 Pull mower engagement lever to off position.
 Put parking brake in engaged position.
 Adjust throttle and choke as required.

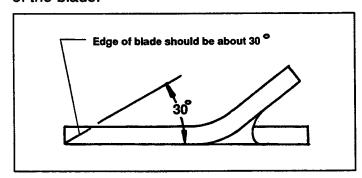

Turn ignition key to start.

- 7. Release the parking brake. Push mower engagement lever forward until over-center snaps into the engaged position. Allow belts to run-in for 5 minutes.
- 8. Release the parking brake. Observe to see that the unit does not creep forward or backwards. If it does creep, adjust hydro neutral control as specified in adjustment section.
- 9. Operate the unit forwards and backwards. Check that all systems function correctly.
- 10. Shut off engine and recheck cutter deck drive belts for proper tension, and any signs of rubbing. Correct and adjust as necessary.

MAINTENANCE

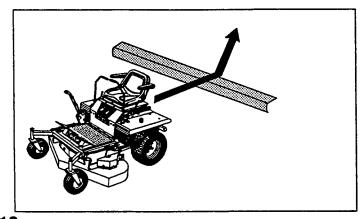

Do not sharpen (X) beyond 1/3 of the width (Y) of the blade.

Suggestion: Dress the blade with a file. Using a wheel grinder may burn the blade.

Curb Climbing

When driving rider up and over a curb, drive in reverse at a angle so that the back drive wheels go over the curb one at a time. When both drive wheels are over the curb, turn machine so that both front caster wheels contact the curb at the same time.

Break		LUBRICATION & MAINTENANCE							
8		fours (Daily) 40 Hours (Weekly)							
		Q Hours (Biweekly)							
		200	Hours (Monthly)						
			PROCEDURE	COMMENTS					
XXX			Check all hardware for proper tightness Change engine oil and filter at 5 hours Change oil and filter at 20 hours **	Fill to dipstick fill mark - SAE 10W30

WARNING

If incorrectly used, this machine can cause severe injury. Those who use and maintain the machine should be trained in its proper use, warned of its dangers, and should read the entire manual before attempting to set up, operate, adjust or service the machine.

LIMITED WARRANTY-COMMERCIAL EQUIPMENT

Any part of the Scag commercial mower manufactured by Scag and found, in the reasonable judgment of Scag, to be defective in material or workmanship, will be repaired or replaced by an Authorized Scag Service Dealer without charge for parts and labor.

The Scag mower including any defective part must be returned to an Authorized Scag Service Dealer within the warranty period. The expense of delivering the mower to the dealer for warranty work and the expense of returning it back to the owner after repair or replacement will be paid for by the owner. Scag's responsibility in respect to claims is limited to making the required repairs or replacements, and no claim of breach of warranty shall be cause for cancellation or rescission of the contract of sale of any Scag mower. Proof of purchase will be required by the dealer to substantiate any warranty claim. All warranty work must be performed by an Authorized Scag Service Dealer.

This warranty is limited to one year from the date of original retail purchase for any Scag mower that is used for commercial purposes, or any other income-producing purpose (90 days for rental use). Traction drive system will be warranted for two full years from date of original retail purchase against defects in material or workmanship excluding hoses, lines and drive belts. Belts and tires are warrantied for 90 days against defects in workmanship or materials.

This warranty does not cover any mower that has been subject to misuse, neglect, negligence, or accident, or that has been operated in any way contrary to the operating instructions as specified in the Technical Manual. The warranty does not apply to any damage to the mower that is the result of improper maintenance, or to any mower or parts that have not been assembled or installed as specified in the Technical Manual.

The warranty does not cover any mower that has been altered or modified. In addition, the warranty does not extend to repairs made necessary by normal wear, or by the use of parts or accessories which, in the reasonable judgment of Scag, are either incompatible with the Scag mower or adversely affect its operation, performance or durability. This warranty does not cover engines and electric starters, which are warranted separately by their manufacturer.

Scag Power Equipment reserves the right to change or improve the design of any mower without assuming any obligation to modify any mower previously manufactured.

All other implied warranties are limited in duration to the one (1) year warranty period or ninety (90) days for mowers used for rental purpose. Accordingly, any such implied warranties including merchantability, fitness for a particular purpose, or otherwise, are disclaimed in their entirety after the expiration of the appropriate one-year or ninety day warranty period. Scag's obligation under this warranty is strictly and exclusively limited to the repair or replacement of defective parts and Scag does not assume or authorize anyone to assume for them any other obligation. Some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.

Scag assumes no responsibility for incidental, consequential or other damages including, but not limited to, expense for gasoline, expense of delivering the mower to an Authorized Scag Service Dealer and expense of returning it back to the owner, mechanic's travel time, telephone or telegram charges, rental of a like product during the time warranty repairs are being performed, travel, loss or damage to personal property, loss of revenue, loss of use of the mower, loss of time or inconvenience. Some states do not allow the exclusion or limitation of incidental or consequential damages. So the above limitation or exclusion may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

PLEASE BE CAREFUL

- 1. Keep all shields in place, especially grass discharge guard.
- 2. Stop machine and remove spark plug wire to adjust or service.
- 3. When mechanism becomes clogged, stop engine before cleaning.
- 4. Keep hands, feet and clothing away from power-driven parts.
- 5. Keep off implement unless seat or platform is provided.
- 6. Keep others off of the tractor (only one person at a time).

REMEMBER - YOUR MOWER IS ONLY AS SAFE AS THE OPERATOR!

FAILURE TO FOLLOW CAUTIOUS OPERATING PRACTICES MAY RESULT IN SERIOUS BODILY INJURY. BESIDES, WE WOULD LIKE YOU TO CONTINUE TO ENJOY AND PROFIT BY USING OUR PRODUCTS.
